Unity & Vuforia - 2 Mark Answers

Short answers in simple English | Easy exam revision

1 **What are GameObjects in Unity? Give two examples.**

GameObjects are the basic objects in a Unity scene. Examples: Cube and Camera.

2 **What is the purpose of the Hierarchy window in Unity?**

It shows all the GameObjects in the current scene. It helps us select and organize them.

3 **What is meant by parenting objects in Unity?**

Parenting means making one object the child of another. When the parent moves, the child moves with it.

4 **What is the Unity Asset Store?**

It is an online store where we can get ready-made 3D models, sounds, scripts, and other assets.

5 **What are Materials in Unity? How are they used?**

Materials decide how an object looks, such as its colour and texture. We apply them to objects to change their appearance.

6 **Differentiate between Awake(), Start(), and Update() methods.**

Awake(): Runs when the script loads.
Start(): Runs before the first frame, after Awake().
Update(): Runs once every frame.

7 **What is Vuforia? What is an Image Target?**

Vuforia: A tool used to make Augmented Reality (AR) apps.
Image Target: A picture that Vuforia recognizes to show AR content.

8 **What is meant by custom image targeting in Vuforia?**

It means using our own picture as an Image Target to show AR objects when the picture is recognized.

9 **What is Debug.Log() in Unity? State its purpose.**

Debug.Log() shows messages in the Unity Console. It helps us check values and find problems in code.

10 **What is Unity Physics? Name any two components used for physics simulation.**

Unity Physics makes objects fall, move, and collide in a realistic way. Components: Rigidbody and Collider.
